EU REGULATION N. 547/2012

- Pumps with a minimum efficiency index MEI ≥ 0.40 in conformity with the EU Regulation in force from 1st January 2015.
- The bench mark for the most efficient water pumps is MEI ≥ 0.70 .
- The efficiency of a pump with a trimmed impeller is usually lower than that of a pump with a full diameter impeller. The trimming of the impeller adapts the pump to a fixed duty point, resulting in a lower energy consumption. The minimum efficiency index (MEI) is based on the full diameter impeller.
- The functioning of the water pump with variable places of operation can be more efficient and economical if, for example, it is controlled by means of a variable speed motor which adjusts the function of the pump to the system.
- The information regarding the bench mark efficiency is available at:
www.europump.org/efficiencycharts

Clean water

Domestic use

PERFORMANCE RANGE

- Flow rate up to **50 l/min** ($3.0 \text{ m}^3/\text{h}$)
- Head up to **70 m**

APPLICATION LIMITS

- Manometric suction lift up to **8 m**
- Liquid temperature between -10°C and $+60^\circ\text{C}$
- Ambient temperature up to $+40^\circ\text{C}$ ($+45^\circ\text{C}$ for IP 05)
- Max. working pressure:
 - **6 bar** for IP 05, IP 07
 - **7 bar** for IP 800, IP1000
- Continuous service **S1**

Q = Flow rate

H = Total manometric head

HS = Suction height

Tolerance of characteristic curves in compliance with EN ISO 9906 Grade 3B.

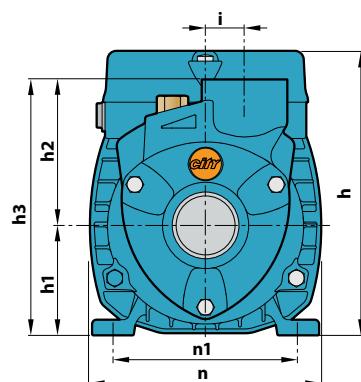

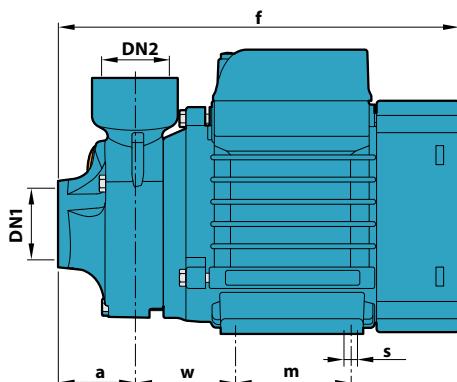

INSTALLATION AND USE

Suitable for use with clean water that does not contain abrasive particles and with liquids that are not chemically aggressive towards the materials from which the pump is made.
Because of their reliability and the fact that they are easy to use and are economical, they are ideal for domestic use and in particular for distributing water in combination with small pressure tanks and for the irrigation of gardens and orchards.
The pump should be installed in an enclosed environment or sheltered from inclement weather.

CONSTRUCTION CHARACTERISTICS

PUMP BODY	Cast iron with an Epoxy Electro Coating treatment, with threaded ports in compliance with ISO 228/1
IMPELLER	Brass with peripheral radial vanes
MOTOR SHAFT	Stainless steel EN 10088-3 - 1.4104
MECHANICAL SEAL	Ceramic - Graphite - NBR
ELECTRIC MOTOR	The three-phase pumps are fitted with high performance motors up to P2=0.55kW in class IE2 and from P2=0.60kW in class IE3 (IEC 60034-30)

INSTALLATION AND USE

Suitable for use with clean water that does not contain abrasive particles and with liquids that are not chemically aggressive towards the materials from which the pump is made.

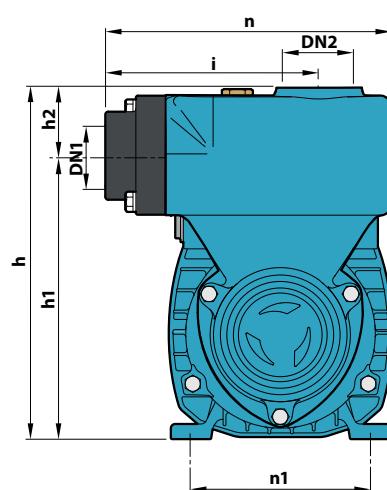

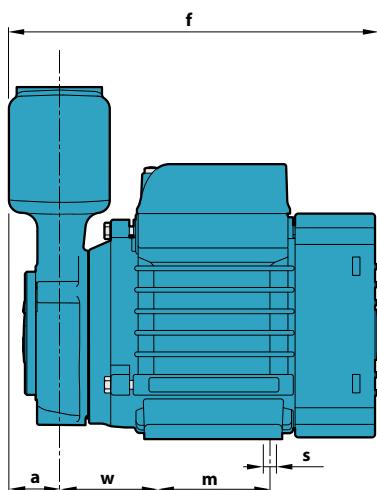

Because of their compactness, reliability and the fact that they are easy to use, they are suitable for use in domestic applications such as the distribution of water in combination with small pressure tanks, for the irrigation of gardens and orchards, for drawing water from tanks and for all those other situations where air or gas may be present in the water to be pumped.

The pump comes complete with a flap-check valve. The pump should be installed in an enclosed environment or sheltered from inclement weather.

CONSTRUCTION CHARACTERISTICS

PUMP BODY	Cast iron with an Epoxy Electro Coating treatment, with threaded ports in compliance with ISO 228/1 and a built-in flap-check valve in the suction port
IMPELLER	Brass with peripheral radial vanes
MOTOR SHAFT	Stainless steel EN 10088-3 - 1.4104

INSTALLATION AND USE

Suitable for use with clean water that does not contain abrasive particles and with liquids that are not chemically aggressive towards the materials from which the pump is made. The hydraulic characteristics of these pumps, coupled with their compactness, makes them suitable for use in both domestic and industrial applications. The pump should be installed in an enclosed environment or sheltered from inclement weather.

INSTALLATION AND USE

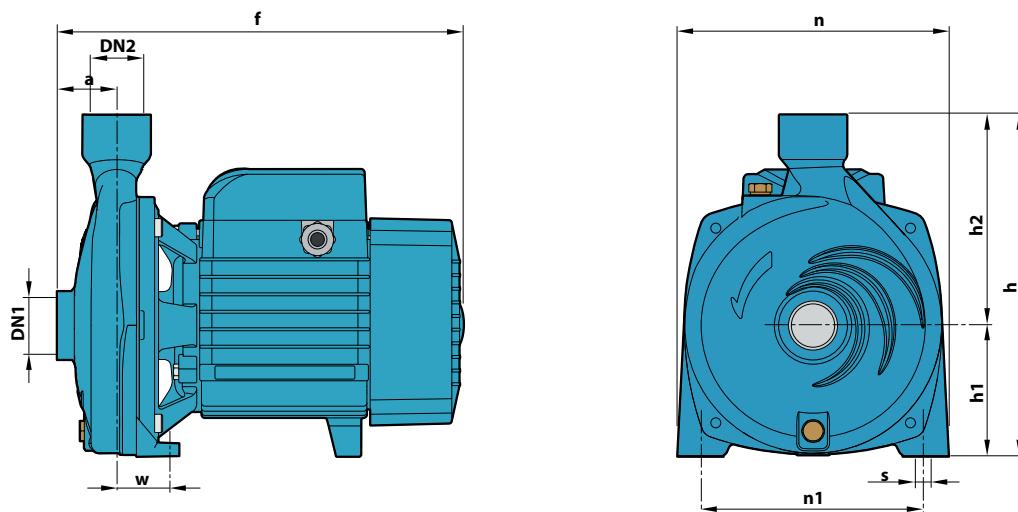

Suitable for use with clean water and with liquids that are not chemically aggressive towards the materials from which the pump is made. Because they are reliable and easy to use these pumps are widely used in domestic and civil applications such as the distribution of water in combination with small and medium sized pressure tanks, for transferring liquids and for the irrigation of gardens and orchards.

The pump should be installed in an enclosed environment or sheltered from inclement weather.

INSTALLATION AND USE

Suitable for use in civil and agricultural applications.

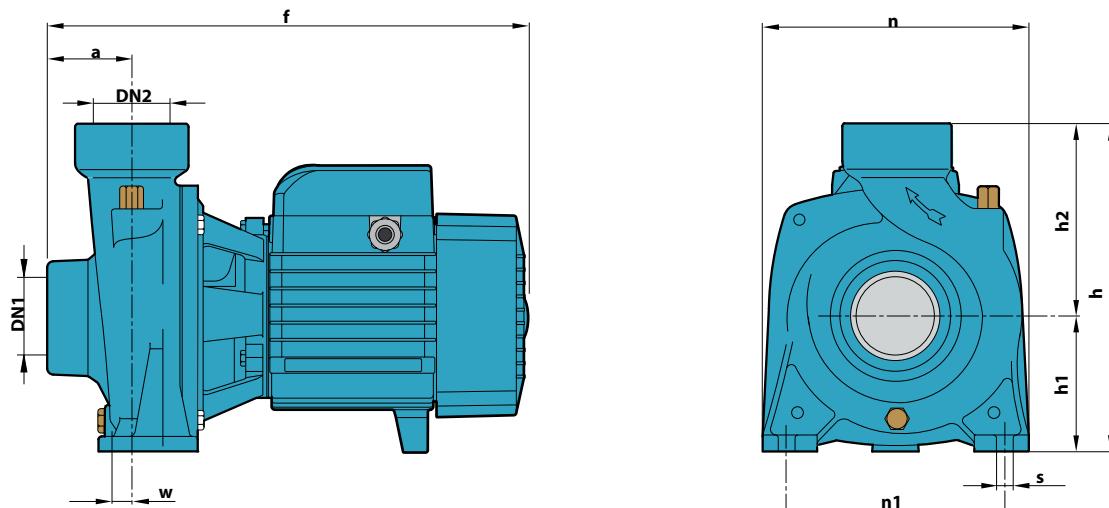

The high efficiency and continuous duty capabilities makes these pumps ideal for use in applications such as flood and spray irrigation, drawing water from lakes, rivers and wells, or for any number of different industrial applications where the characteristics of high flow rates and mid to low head are required.

The pump should be installed in an enclosed environment or sheltered from inclement weather.

Q = Flow rate

H = Total manometric head

HS = Suction height

Tolerance of characteristic curves in compliance with EN ISO 9906 Grade 3B.

INSTALLATION AND USE

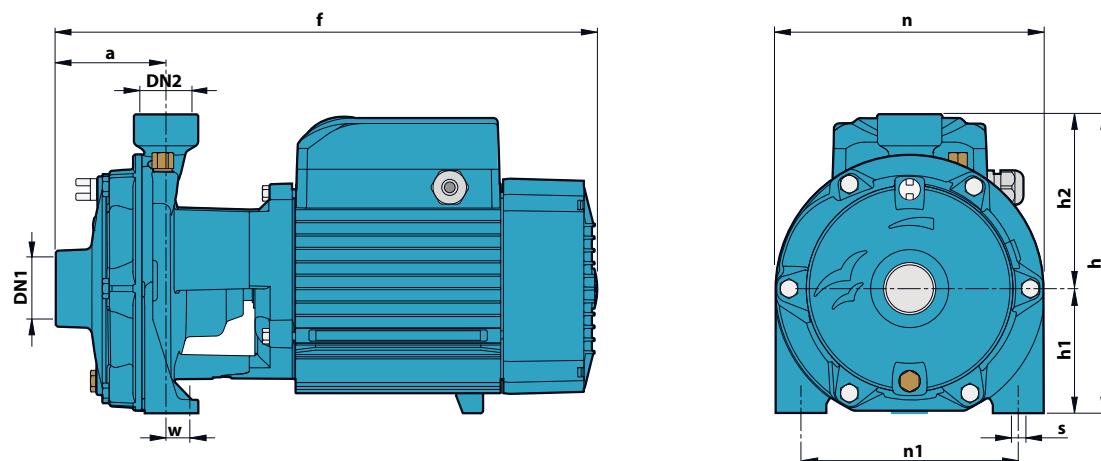

Suitable for use with clean water and with liquids that are not chemically aggressive towards the materials from which the pump is made. The high performance and adaptability to a wide range of applications make them the ideal choice in domestic, civil and industrial applications, in particular for the distribution of water in combination with pressure tanks for boosting pressure in the network and for firefighting sets.

The pump should be installed in an enclosed environment or sheltered from inclement weather.

CONSTRUCTION CHARACTERISTICS

PUMP BODY	Cast iron complete with threaded ports in compliance with ISO 228/1
IMPELLERS	Brass (Stainless steel AISI 304 for ICB 100N)
MOTOR SHAFT	Stainless steel EN 10088-3 - 1.4104
MECHANICAL SEAL	Graphite - Ceramic - NBR (Ceramic - Graphite - NBR for ICB 100N)
ELECTRIC MOTOR	The three-phase pumps are fitted with high performance motors in class IE3 (IEC 60034-30)

INSTALLATION AND USE

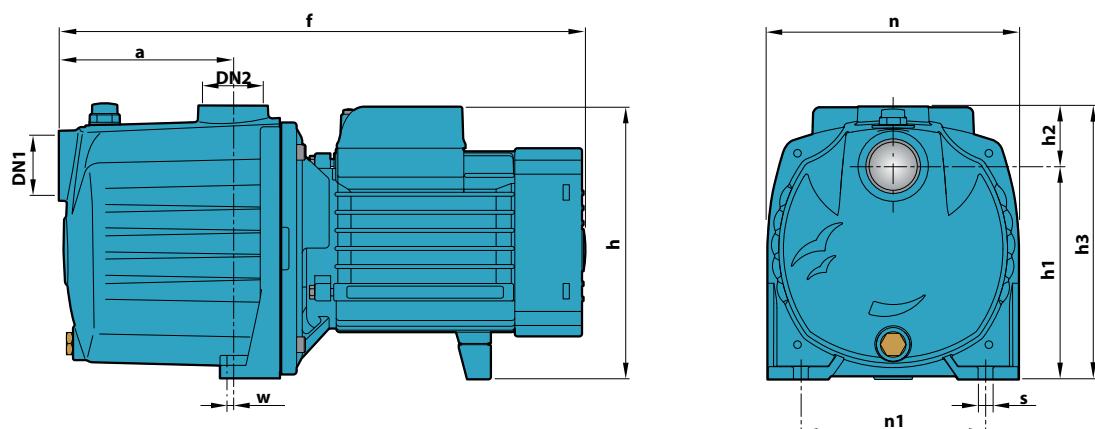

Suitable for use with clean water and with liquids that are not chemically aggressive towards the materials from which the pump is made. As a result of their quietness, these pumps are widely used in domestic applications such as the distribution of water in combination with small and medium sized pressure tanks, and for the irrigation of gardens and orchards, etc.

The pump should be installed in an enclosed environment or sheltered from inclement weather.

CONSTRUCTION CHARACTERISTICS

PUMP BODY	Cast iron with an Epoxy Electro Coating treatment, with threaded ports in compliance with ISO 228/1

PERFORMANCE RANGE

- Flow rate up to **70 l/min** (4.2 m³/h)
- Head up to **60 m**

APPLICATION LIMITS

- Manometric suction lift up to **9 m** (HS)
- Liquid temperature between **-10 °C** and **+40 °C**
- Ambient temperature up to **+40 °C**
- Max. working pressure **6 bar**
- Continuous service **S1**

H = Total manometric head

HS = Suction height

Tolerance of characteristic curves in compliance with EN ISO 9906 Grade 3B.

INSTALLATION AND USE

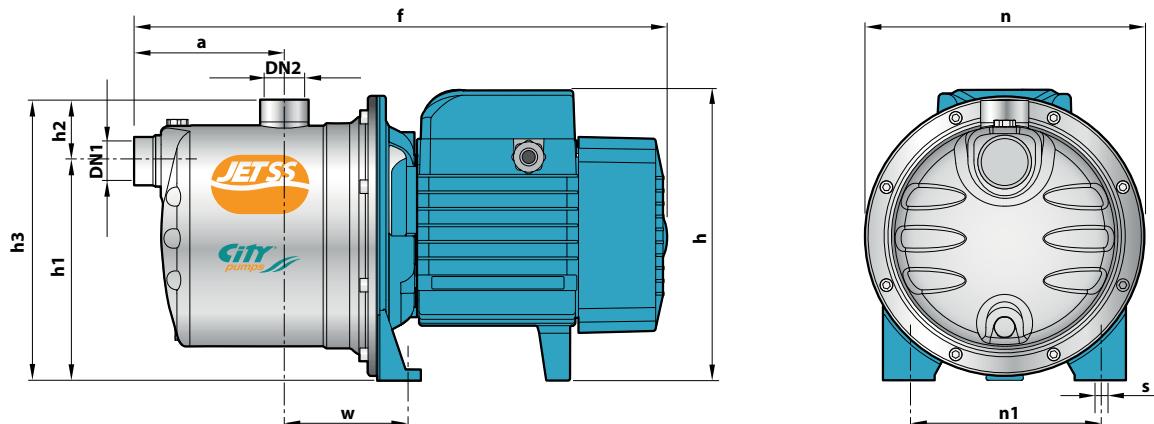

Suitable for use with clean water and with liquids that are not chemically aggressive towards the materials from which the pump is made. The self-priming **JET SS** pumps are designed to pump water even in cases where air is present. As a result of their reliability and the fact that they are easy to use, they are recommended for use in domestic applications such as the distribution of water in combination with small or medium sized pressure tanks, and for the irrigation of gardens and orchards, etc.

The pump should be installed in an enclosed environment or sheltered from inclement weather.

CONSTRUCTION CHARACTERISTICS

PUMP BODY	Stainless steel AISI 304 complete with threaded ports in compliance with ISO 228/1
IMPELLER	Stainless steel AISI 304
MOTOR SHAFT	Stainless steel EN 10088-3 - 1.4104
MECHANICAL SEAL	Ceramic - Graphite - NBR
ELECTRIC MOTOR	The three-phase pumps are fitted with high performance motors in class IE3 (IEC 60034-30)

MOTOR 4"	Oil filled motor Jacket: AISI 316 stainless steel Shaft: "DUPLEX" stainless steel
POWER CABLE	Length of power cable: – for P2 from 0.37 to 3 kW: 1.7 m – for P2 from 4 to 7.5 kW: 2.7 m

PERFORMANCE RANGE

- Flow rate up to **340 l/min** (20.4 m³/h)
- Head up to **405 m**

APPLICATION LIMITS

- Maximum liquid temperature **+35 °C**
- Maximum sand content **150 g/m³**
- **100 m** immersion limit
- Installation:
 - vertical
 - horizontal, with the following limits:
1SP4 - 1.5SP4 - 2SP4 - 4SP4 up to **27 stages**
6SP4 - 8SP4 up to **17 stages**
10SP4 - 12SP4 - 15SP4 up to **12 stages**
- Starts/hour: **20** at regular intervals
- Minimum flow rate for motor cooling **8 cm/s**
- Continuous service **S1**

INSTALLATION AND USE

Suitable for use with clean water with a sand content of no more than 150 g/m³. Because of their high efficiency and reliability, they are suitable for use in domestic, civil and industrial applications such as for the distribution of water in combination with pressure tanks, for irrigation, for washing plants and for pressure boosting in fire-fighting sets, etc..

CONSTRUCTION AND SAFETY STANDARDS

- Single-phase 230 V - 50 Hz
- Three-phase 400 V - 50 Hz

The single-phase versions supplied with a capacitor included in the packaging.

Q = Flow rate

H = Total manometric head

Tolerance of characteristic curves in compliance with EN ISO 9906 Grade 3B.

INSTALLATION AND USE

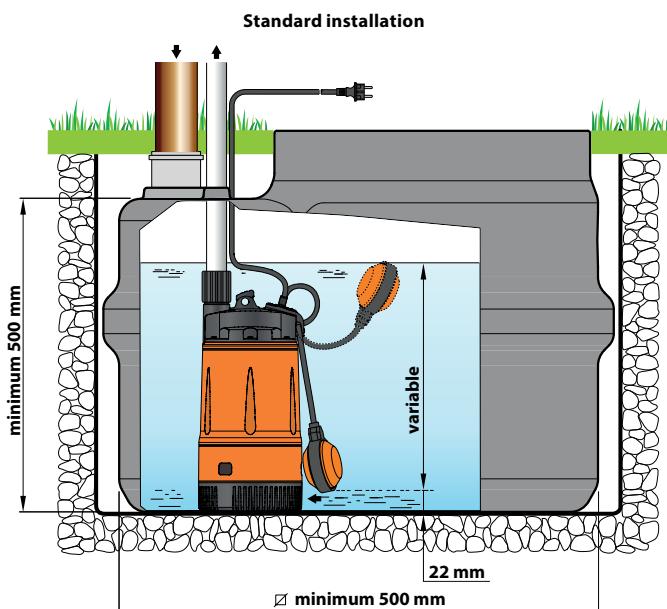

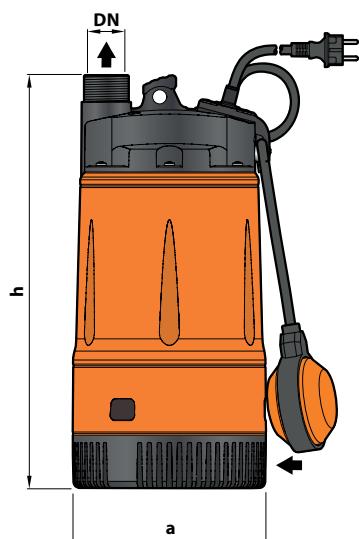

PLURI pumps are recommended for pumping clean water and liquids that are not chemically aggressive for the materials from which the pump is made.

Because of their high efficiency and reliability they are suitable for use in applications such as domestic water supply from reservoirs, tanks or relatively deep wells, for drawing rain water from cisterns to water gardens or for use in irrigation systems, etc.

Tolerance of characteristic curves in compliance with EN ISO 9906 Grade 3B.

INSTALLATION AND USE

PLURI TECH pumps are recommended for pumping clean water and liquids that are not chemically aggressive for the materials from which the pump is made.

Because of their high efficiency and reliability they are suitable for use in applications such as domestic water supply from reservoirs, tanks or relatively deep wells, for drawing rain water from cisterns to water gardens or for use in irrigation systems, etc.

An internal electronic device starts or stops the pump automatically when the tap is opened or closed.

CONSTRUCTION CHARACTERISTICS

DELIVERY BODY	Glass fibre reinforced technopolymer
PUMP BODY AND SUCTION FILTER	Glass fibre reinforced technopolymer
IMPELLERS	Noryl FE1520PW
MOTOR SHAFT	Stainless steel EN 10088-3 - 1.4104
TWO MECHANICAL SEALS SEPARATED BY AN OIL CHAMBER	Motor side: Ceramic - Graphite - NBR Pump side: Ceramic - Silicon carbide - NBR
POWER CABLE	H07 RN-F type 10 m long power cable with Schuko plug

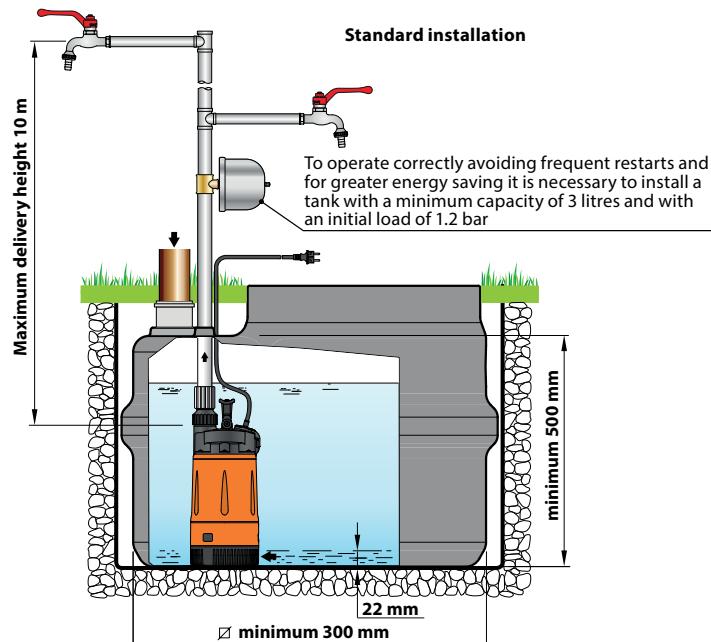

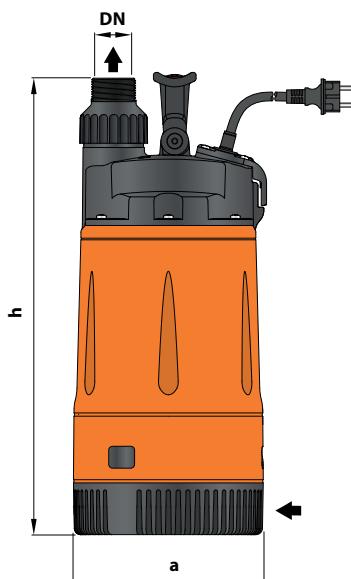

ELECTRONIC DEVICE

PLURI TECH pumps are fitted with an internal electronic device which starts the pump when the pressure of the system falls below 1.5 bar (eg. when opening a tap) and stops it when the flow falls below 3 litre per minute.

It protects the pump:

- against dry running;
- against blockage: after long periods of pump inactivity the electronic device starts the pump every 48 hours for 10 seconds

Q = Flow rate

H = Total manometric head

Tolerance of characteristic curves in compliance with EN ISO 9906 Grade 3B.

INSTALLATION AND USE

The SPEED series is suitable for use with clear water that does not contain abrasive particles.

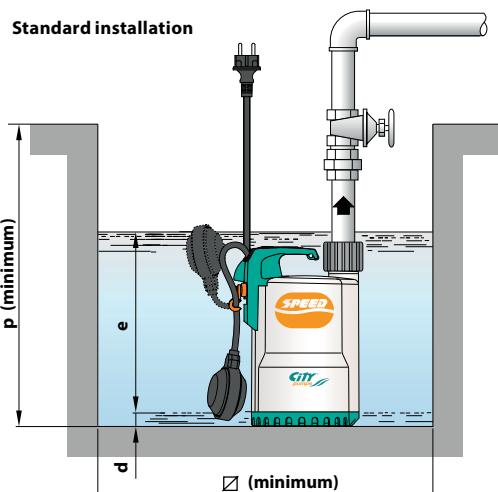

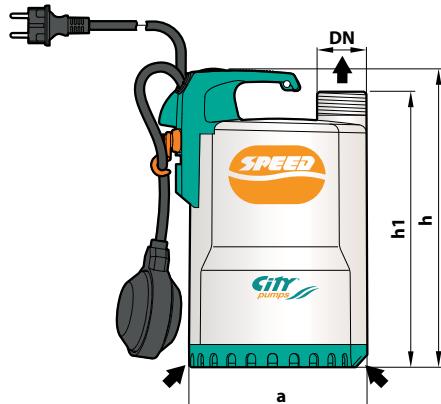

Because of the design solutions that have been adopted, such as the complete cooling of the motor and the shaft with double seal, these pumps are easy to use and reliable.

They are suitable for use in applications such as draining small flooded areas (rooms, cellars, garages) in the event of an emergency, for the disposal of waste water in the home (from dishwashers, washing machines) and for emptying drainage traps.

INSTALLATION AND USE

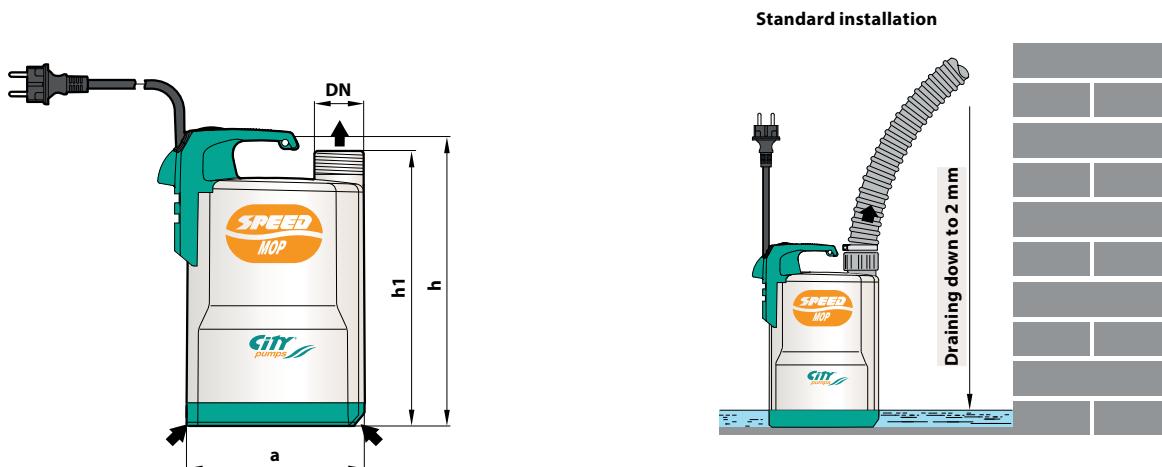

The SPEED MOP series is suitable for use with clear water that does not contain abrasive particles.

Because of their ability to drain water to a level of 2 millimetres above ground level, they are suitable for use in domestic emergencies where a small area must be drained to the lowest possible level.

INSTALLATION AND USE

The SPEED VORTEX pump is suitable for use with dirty water that is not chemically aggressive towards the materials from which the pump is made.

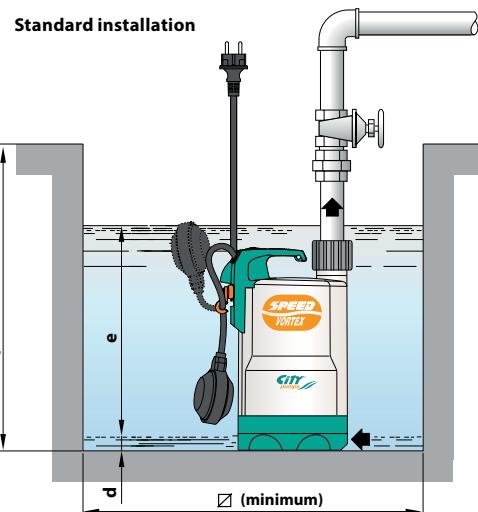

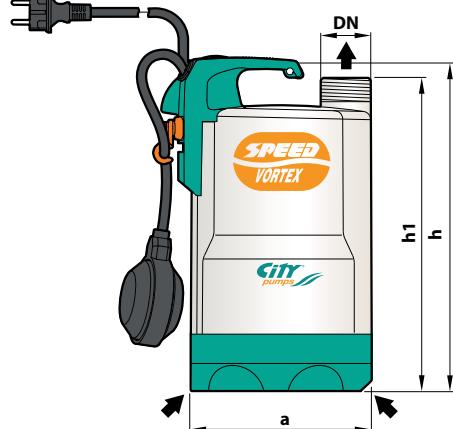

Because of the design solutions that have been adopted, such as the complete cooling of the motor and the shaft with double seal, these pumps are easy to use and reliable.

They are suitable for use in applications such as clearing dirty water, emptying tanks, discharging domestic waste water, and for emptying collection traps containing suspended solids up to a maximum of Ø 20 mm.

INSTALLATION AND USE

The RANGER-ST submersible pumps in stainless steel are recommended for draining filthy water in domestic, civil and industrial applications, in every case where there are solid bodies in suspension, for example water mixed with mud, groundwater, surface water. They are suitable for draining flooded areas such as cellars, underground car parks, car washes, for emptying cesspools and for sewage disposal. These pumps distinguish themselves for their reliability, which can be best appreciated under automatic operating conditions in fixed installations.

INSTALLATION AND USE

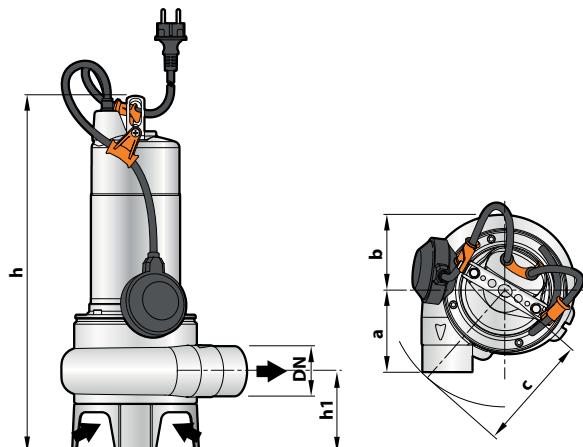

RANGER MC ST submersible pumps in stainless steel are recommended for draining dirty and filthy water in domestic, civil and industrial applications. They come equipped with a DOUBLE-CHANNEL impeller and are capable of pumping liquids containing short fibred suspended solids up to Ø 50 mm. They are ideal for pumping sewage, waste water, surface water and water mixed with mud in locations such as blocks of flats and detached houses.

These pumps distinguish themselves for their reliability, which can be best appreciated under automatic operating conditions in fixed installations.

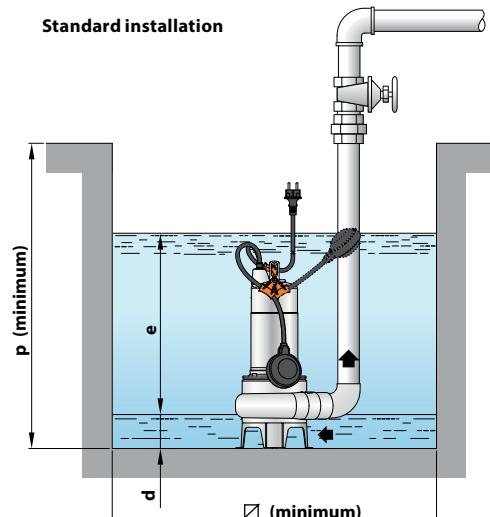

CONSTRUCTION CHARACTERISTICS

PUMP BODY	Stainless steel AISI 304 with threaded port in compliance with ISO 228/1

INSTALLATION AND USE

RANGER pumps are recommended for domestic, civil and industrial applications in all cases where the water contains suspended solids up to Ø 50 mm, for example groundwater, surface water, filthy and dirty water.

They are for example suitable for draining flooded areas such as cellars, underground car parks, car washes, for emptying cesspools and for sewage disposal.

These pumps distinguish themselves for their reliability, which can be best appreciated under automatic operating conditions in fixed installations for the disposal of waste water in the home (from dishwashers, washing machines) and for emptying drainage traps.

Q = Flow rate

H = Total manometric head

Tolerance of characteristic curves in compliance with EN ISO 9906 Grade 3B.

INSTALLATION AND USE

The TITAN series of pumps, manufactured from heavy gauge robust cast iron, resistant to abrasion and long-lasting, are fitted with a VORTEX impeller and are therefore suitable for draining dirty, filthy and reffluent water, and water mixed with putrid mud. They are suitable for installation in sewers, tunnels, excavations, canals, underground car parks, etc.

CONSTRUCTION CHARACTERISTICS

PUMP BODY	Cast iron with threaded port in compliance with ISO 228/1
IMPELLER	VORTEX type in cast iron with an Epoxy Electro Coating treatment
MOTOR SHAFT	Stainless steel AISI 431
TWO MECHANICAL SEALS SEPARATED BY AN OIL CHAMBER	Motor side: Ceramic - Graphite - NBR Pump side: Silicon carbide - Silicon carbide - NBR
POWER CABLE	H07 RN-F type 10 m long power cable

INSTALLATION AND USE

PATROL series pumps, made from heavy gauge robust cast iron, resistant to abrasion and long-lasting, are fitted with a DOUBLE-CHANNEL impeller and are capable of pumping liquids containing short fibred suspended solids. They are ideal for pumping sewage, waste water, water mixed with mud, groundwater and surface water in locations such as blocks of flats, public buildings, factories, multi-storey and underground car parks, washing areas, etc.

CONSTRUCTION CHARACTERISTICS

INSTALLATION AND USE

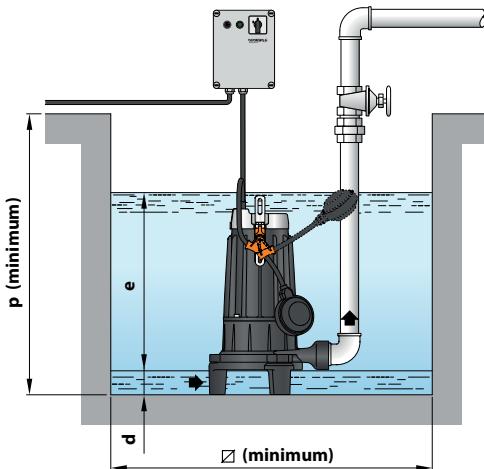

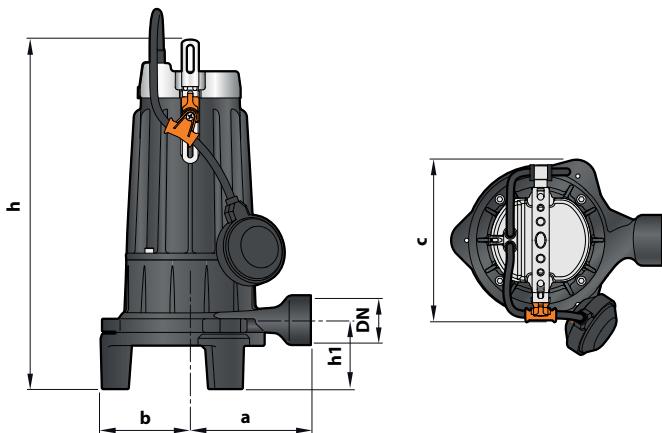

The TRC series of grinder pumps manufactured from heavy gauge robust cast iron, resistant to abrasion and long-lasting, are fitted with a GRINDER in tempered stainless steel of great resistance which completely grinds up solid bodies and fibres in waste and refluente water from domestic and civil applications and conveys it under pressure into the sewers through small diameter pipes.

CONSTRUCTION CHARACTERISTICS

PUMP BODY	Cast iron with an Epoxy Electro Coating treatment, with threaded port in compliance with ISO 228/1	
IMPELLER	Technopolymer open type	
GRINDER	Tempered AISI 440C stainless steel

 Domestic use

S.O.S. is the indispensable and practical emergency kit for tackling flooding in garages, cellars and basements with efficacy and speed.

Thanks to the versatile drainage pump and the 15 metres long PVC hose it is possible to swiftly drain the flooded area, if necessary using the plastic crate as a filter.

With S.O.S. you can completely drain the area affected by flooding: the pump can in fact suck up water down to a level of only 2 mm from the bottom.

With S.O.S. you have everything you require ready for use:

- pump with a ready-fitted connector, a 10 metres long power cable with Schuko plug and an external float switch;
- PVC hose with a rapid connector;
- Crate-filter to prevent possible bulky residues blocking water drainage.

TYPICAL USE

In the case of flooded premises place S.O.S. on the floor, attach the flat hose to the pump by means of the rapid connector, plug into the electricity network and empty the water through the hose. The plastic crate will act as a filter, making it possible to drain down to a level of about 2 cm from the bottom.

In order to drain the residual water disconnect the pump from the crate and place it on the floor. The pump will be able to drain down to a level of only 2 mm from the bottom.

S.O.S. also has the advantage that it can be stored on a shelf so as to have everything necessary in order and ready for use.

COMPONENTS

SUBMERSIBLE SPEED MOP PUMP

- Single-phase **230 V - 50 Hz**
- Thermal overload protector incorporated in the winding
- **10 metres** power cable fitted with Schuko plug
- External float switch
- "CAMLOCK" rapid connection
- Performance:
 - **H max= 9 m**
 - **Q max= 160 l/min**
- Emptying level down to **2 mm** from the bottom

PVC HOSE

- "CAMLOCK" rapid connection
- Length of tube **15 m**
- Diameter of tube **1¼"**

CRATE-FILTER

- Complete with a system for fixing the pump for a stable operation and an easy detachment for use of the pump without the crate-filter
- Complete with a lid so as to put away S.O.S. in order and have it always ready for use

DIMENSIONS AND WEIGHTS

PRESSURE LOSSES

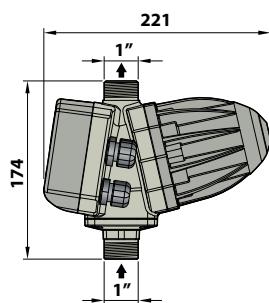

MAXIMUM DELIVERY HEIGHT

- 2.2 bar version = 18 m
- 1.5 bar version = 11 m
- 0.8 bar version = 5 m

DIMENSIONS AND WEIGHT

Weight: 1.63 kg

PERFORMANCE RANGE

- Max flow rate: **200 l/min** (12 m³/h)
- Working pressure: **10 bar**
- Restarting pressure: **1.5 bar**

APPLICATION LIMITS

- Maximum liquid temperature +65 °C
- Ambient temperature up to +40 °C
- Burst pressure > **40 bar**
- Protection: **IP 65**
- Power: – **0.75 kW (1 HP)** TALENTO-1
– **1.5 kW (2 HP)** TALENTO-2
- Voltage: **230 V**
- Frequency: **50/60 Hz**
- Max current: – **10 A** TALENTO-1
– **16 A** TALENTO-2
- Flow rate: **12 m³/h**

CONSTRUCTION AND SAFETY STANDARDS

- Resinated and easily replaced electronic card for complete protection from humidity, fitted in the case with an IP 65 protection.
- The electronic card inside TALENTO has undergone the strictest EMC tests of electromagnetic compatibility.

INSTALLATION AND USE

The TALENTO series consists of electronic devices designed to start (when a tap is turned on) and stop (when a tap is turned off) single-phase pumps.

A microprocessor protects the pump from dry running, and allows the pump to be restarted either automatically or manually. It also prevents the pump from starting too often when small leaks are present within an installation.

OPTIONS AVAILABLE ON REQUEST

- TALENTO-1 version with restarting pressure **0.8 bar**
- TALENTO-2 version with restarting pressure **2.2 bar**
- Version with 1" NPT
- Version with cable and Schuko plug and socket
- Version with pressure gauge

STARTING PRESSURE

There are three different models available, each with a different starting pressure and easily identified by the coloured cap positioned at the rear of the TALENTO, for installations requiring delivery at various heights.

ACCESSORIES

GSR

TALENTO SMALL

ELECTRONIC PRESSURE REGULATORS

Domestic use

PERFORMANCE RANGE

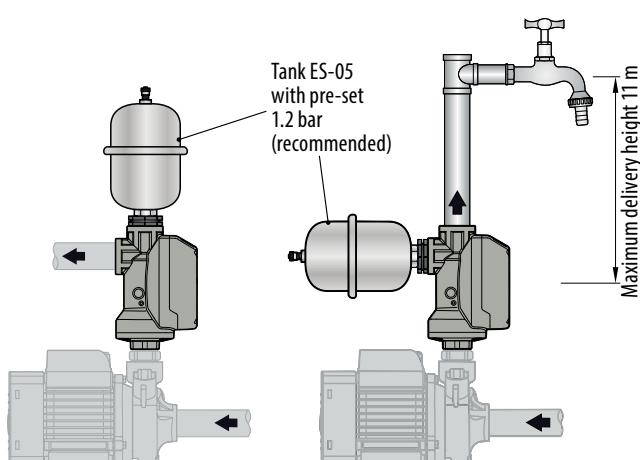

- Max flow rate: **200 l/min** (12 m³/h)
- Working pressure: **10 bar**
- Restarting pressure: **1.5 bar**

APPLICATION LIMITS

- Maximum liquid temperature **+50 °C**
- Ambient temperature up to **+40 °C**
- Burst pressure **40 bar**
- Protection: **IP 65**
- Power:
 - **0.75 kW (1 HP)** TALENTO SMALL-1
 - **1.5 kW (2 HP)** TALENTO SMALL-2
- Voltage: **230 V**
- Frequency: **50/60 Hz**
- Max current:
 - **12 A** TALENTO SMALL-1
 - **16 A** TALENTO SMALL-2

STANDARD INSTALLATION

In order to avoid frequent restarts we advise installing a small accumulation tank (ES-05).

CONSTRUCTION AND SAFETY STANDARDS

- Tropicalised resinated and easily replaced electronic card for complete protection from humidity, fitted in the case with an IP 65 protection.
- The electronic card inside the TALENTO SMALL has undergone the strictest EMC tests of electromagnetic compatibility (low emission of interference and a high immunity to disturbance) as a guarantee of its reliable use everywhere.

INSTALLATION AND USE

Flow and pressure sensing device for control and protection of single-phase pumps up to 2 HP (for domestic applications). It starts the pump when there is a drop in system pressure (e.g. when opening a tap) and stops the pump when the flow drops below 2 l/min (tap closed).

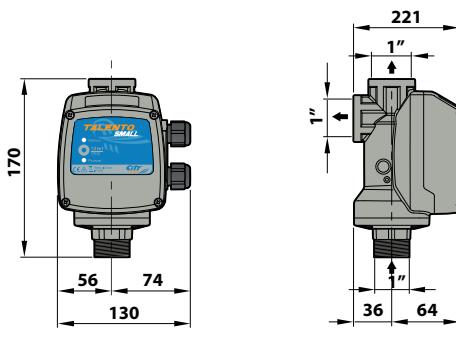

OPTIONS AVAILABLE ON REQUEST

- Version with pressure gauge

ACCESSORIES

- **ES-05** Stainless steel 0.5 litre tank (1")
- **GSR** Special three piece joint with an o-ring seal (1" M)
