Silicone translucent	63 mm	64 - 66 mm	1,5 ± 0,15 mm
PUR transparent	63 mm	64,5 mm	0,75 ± 0,025 mm

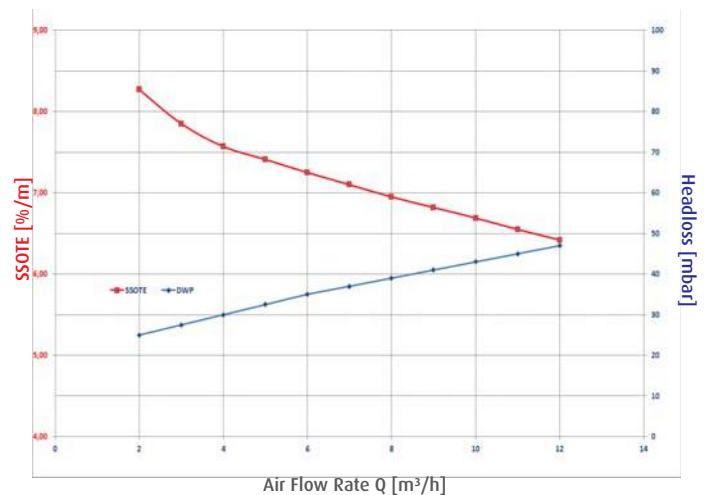

- Shutdown of operation is highly recommended for air flow rates lower than minimum rate.
- Do not apply overload air flow rate (e.g. cleaning) for more than 10 minutes each day.
- Numbers are for guidance only. Operating diffusers at too high or too low an airflow rate may reduce lifetime or performance. See Technical Report 'Membrane Fouling Issues' for details.

2-grooved diffuser

Air (blue) flows easily through the grooves causing considerable lower headloss. The circumference of the grooved tube is equal to the ID of the membrane.

Air is squeezed through a narrow gap between sleeve and tube increasing headloss.

Grooves will evenly distribute air from front to end over years even in difficult to treat waste water.
